The tag line for Lineberger Orthodontics is “Smile On”—and that’s precisely what their patients do with confidence. It’s the mission of Drs. Matt and Megan and their team to provide stunning smiles while offering the most advanced and caring orthodontics experience.

With their innovative treatment in a new, state-of-the-art facility, the Linebergers make sure their patients’ battle against “crooked” is as pleasant and efficient as possible. The practice offers the advantage of a board-certified husband-and-wife team that provides two experienced sets of eyes and minds to come up with a careful and thoughtful custom treatment plan.

The Linebergers’ cutting-edge care includes digital scanners that capture the teeth in three dimensions. This technology not only makes Lineberger Orthodontics an “impressionless” practice, but it allows the patients to see their enhanced smile before treatment even begins.

Treatment plans are digitally customized

to your specific facial characteristics and smile. Invisalign aligners or Damon braces, chosen by you, are used to execute the smile enhancement. For those who want treatment to progress as quickly as possible, the practice offers AcceleDent, a soft-pulse medical device that gently accelerates the movement of teeth. The device reduces the orthodontic process significantly, sometimes finishing treatment in half the time.

A comfortable, interactive waiting room, complete with a Starbucks coffee machine and fresh baked cookies, is another example of the practice’s commitment to stellar patient service. The Linebergers also offer reward cards in which patients collect points for things such as good hygiene and community service, then pick a gift card from a variety of choices as they accrue points.

“Whether it’s a good day or a bad day,” Dr. Megan Lineberger says, “we want to give our patients that spectacular grin that allows them to pick their head up and ‘Smile On’—no matter what life throws at them.”
